Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Monica is interested in finding a treasure but the key to opening is to get the sum of the main diagonal elements and secondary diagonal elements.

Write a program to help Monica find the diagonal sum of a square 2D array.

Note: The main diagonal of the array consists of the elements traversing from the top-left corner to the bottom-right corner. The secondary diagonal includes elements from the top-right corner to the bottom-left corner.

Input Format

The first line of input consists of an integer N, representing the number of rows and columns.

The following N lines consist of N space-separated integers, representing the 2D array elements.

Output Format

The first line of output prints "Sum of the main diagonal: " followed by an integer, representing the sum of the main diagonal.

The second line prints "Sum of the secondary diagonal: " followed by an integer, representing the sum of the secondary diagonal.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3
1 2 3
4 5 6
7 8 9
Output: Sum of the main diagonal: 15
Sum of the secondary diagonal: 15

Answer

```java
// You are using Java
import java.util.Scanner;
class Main{
 public static void main(String [] args){
     Scanner s=new Scanner(System.in);
     int n=s.nextInt();
     int a[][]=new int[n][n];
     for(int i=0;i<n;i++){
        for(int j=0;j<n;j++){
           int val=s.nextInt();
           a[i][j]=val;
        }
     }
     int sum=0;
     for(int i=0;i<n;i++){
        sum+=a[i][i];
     }
     System.out.println("Sum of the main diagonal: "+sum);
```

```
        sum=0;
        int c=n-1;
        for(int j=0;j<n;j++){
            sum+=a[c][j];
            c--;
        }
        System.out.println("Sum of the secondary diagonal: "+sum);
    }
}
```
